3M™ Grouper Plus Content Services (GPCS)

- Access Solventum's comprehensive grouping, editing, reimbursement, quality and pay for performance content

- Provide timely regulatory, payment and quality updates with minimal ongoing maintenance by using a cloud-hosted platform

- Enhance the value of various applications that process claims, calculate reimbursement and payment, analyze data, evaluate compliance and more

High security standards

Through our purpose-built platform, 3M GPCS is Federal Risk and Authorization Management Program (FedRAMP®) and StateRAMP™ Authorized. Healthcare organizations working with federal and state governments can use 3M GPCS knowing it has gone through a thorough security and risk assessment.

The challenge:

In an increasingly complex and dynamic regulatory and payment environment, healthcare providers and software partners are challenged to implement and maintain current and comprehensive grouping, editing and reimbursement content. This content is constantly evolving and can change frequently. While some changes may be minor, other changes can be major. Staying up to date is critical for managing a business; however, it is labor intensive and requires specialized skills.

In addition, increased expectations and demands on information technology (IT) departments can take a toll given the resources and time required for implementation and ongoing maintenance. Organizations are looking to newer technologies to allocate resources more effectively and efficiently.

The solution: Solventum expert content in the cloud

For decades, healthcare providers, third party software partners, payers, consultants and analytics companies worldwide have embedded Solventum regulatory content within their own applications. This approach gives customers integrated access to this valuable content and allows them to analyze and report on data for their own needs or those of their customers.

To support organizations faced with intense IT resource pressures and time constraints, Solventum can process data at scale and deliver our rich regulatory and proprietary content through web services, industry standard interfaces and a cloud environment. 3M GPCS leverages web technology to deliver content with greater timeliness and less maintenance than on-premises systems. 3M GPCS provides up to date, secure access to grouping, editing, reimbursement, quality and pay-for-outcomes classifications. The content can be viewed from many different workflows and platforms. For more information, review the Solventum grouping, editing and reimbursement fact sheet (PDF, 113 KB).

Key features and benefits

- **Standardized implementation** – OAuth (REST) web services are used to integrate Solventum's content into customers' applications using the programming language of their choice.

- **Low maintenance** – Backward-compatible interfaces minimize the amount of ongoing development required.

- **Comprehensive and timely content** – Public and proprietary grouping software, editing, pay-for-outcomes classification and reimbursement, quality and payment content are available in the web service.

- **Flexible workflow** – Content can be accessed in real time or in a batch environment from almost any type of application.

- **High security standards** – 3M GPCS is assessed annually by third party organizations, including FedRAMP, StateRAMP and SOC 2+. We follow current National Institute of Standards and Technology (NIST) from special publication 800-53. This includes more than 300 security and privacy controls for information systems and organizations to meet federal and state security requirements. Data is encrypted in transit with no protected health information (PHI) stored in the cloud.

Available content

3M GPCS can be licensed with a variety of inpatient, outpatient and population health grouping methodologies and numerous state and payer payment systems. Additional modules available within 3M GPCS include:

- **3M™ Medical Necessity** – standalone editing for outpatient services, including Medicare national coverage determinations (NCDs), local coverage determinations (LCDs), and frequency, age and gender restrictions; ICD-10 diagnosis code and modifier validity; and other state Medicaid and payer-specific edits.

- **3M™ Pricer Tables** – intended for use by payers and other organizations that process claims from multiple providers, 3M Pricer Tables provide facility-specific variables for all applicable providers and are currently available for all Medicare solutions, TRICARE Outpatient Prospective Payment System (OPPS) and most **3M™ All Patient Refined Diagnosis Related Group (APR DRG)** and **3M™ Enhanced Ambulatory Patient Group (EAPG)**-based Medicaid reimbursement methodologies.

Interactive module

The 3M GPCS interactive module allows customers to process an individual patient record and generate grouping results, estimated reimbursement and edits using a web browser. Users manually enter claims data, view results on the screen and generate a report to print or save.

Helping your bottom line and timeline

With 3M GPCS, your organization can access timely and business critical financial, compliance and quality content in your workflow. End users and customers have the advantage of a well-integrated information system that stays current with federal and state regulations — with minimal use of IT or technical resources. Software partners, consultants and analytics firms can also focus on their core products and businesses and enjoy a reduced IT and implementation role.

Contact Solventum today
