

3M

Tegaderm™
Brand

**Versatile.
Gentle. Secure.**

A selection guide for
3M™ Tegaderm™ Dressings.

The story of 3M™ Tegaderm™ Brand was written by you.

Together, we've changed the world
of IV care and wound care.

For more than 40 years, 3M scientists have partnered with clinicians to develop dressings that would improve patient care. Through collaboration, we created 3M™ Tegaderm™ Transparent Film Dressing that went beyond tape and gauze to offer transparent window dressings to provide clear views of IV sites and wounds to improve ease of monitoring.

Over the decades, clinicians have worked tirelessly to improve patient practices. When you came to us with new challenges, we listened. Your insights helped improve Tegaderm™ dressings to:

**increase holding
power in moist
conditions**

**offer a solution
to fit pediatric
patients**

**set new standards with
borders, notches and
enhanced securement**

Today, 3M™ Tegaderm™ CHG Chlorhexidine Gluconate I.V. Securement Dressing is the only transparent dressing cleared by the Food and Drug Administration (FDA) to reduce catheter-related bloodstream infections (CRBSIs) and vascular catheter colonization.¹

While Tegaderm Brand sets new standards in IV care, it also encompasses a comprehensive range of dressings and solutions for advanced wound care. Over 50 years ago, 3M scientists invented gentle-to-skin medical adhesives and for decades pioneered bold innovations to help create an environment to promote healing. These breakthroughs in wound healing helped optimize wear time with dressings that offer gentle adhesion management, moisture control and conformability in designs that are easy to apply and remove. Tegaderm Brand innovations help protect patients from complications and promote better outcomes around the world.

To all the clinicians who continue to help us simplify and improve care practices, thank you.

1. U.S. Food and Drug Administration, Department of Health & Human Services. 3M™ Tegaderm™ CHG Chlorhexidine Gluconate I.V. Securement Dressing 510(k) K153410 approval letter, May 15, 2017. Retrieved June 18, 2020 from https://www.accessdata.fda.gov/cdrh_docs/pdf15/K153410.pdf

Unmatched support to match the dedication of your team.

Enjoy all the advantages of partnering with us. And we'll raise standards with you.

Onsite training. Ongoing support. 3M is on call for education.

Your commitment to delivering the best patient care possible drives us to offer more every day. More specialists collaborating with you on process improvements. More education and training programs onsite to help busy staff work efficiently. More ongoing support to help achieve compliance across the board.

Rely on our team of 3M Clinical Specialists with decades of experience to help you stay on top of current best practices. With a robust portfolio of tools and processes, our team handles the legwork so you can implement successful programs and find resources that match your needs.

3M™ Peak™ Clinical Outcomes Program: Customized in-service support and resources.

The 3M™ Peak™ Clinical Outcomes Program begins with 3M Clinical Specialists and the facility clinicians conducting an onsite assessment to understand your unique needs and challenges. Together, we evaluate clinical practices and facility processes and customize a program that will give you tools, training and resources designed for your needs.

How the Peak Program works:

Identify

Identify the areas where you have the biggest opportunity to drive impact at your facility.

Improve

Improve or implement new work processes and protocols through a variety of tools and approaches.

Learn

Learn about industry best practices, clinical evidence and new ways to improve outcomes.

Maintain

Maintain the progress you've made and continue to keep staff educated and engaged.

3MSM Health Care Academy: Education for health care professionals.

As the medical landscape shifts, maintaining traction can be difficult. Continue your education with 3M™ Health Care Academy. Take advantage of online courses to sharpen your skills, enhance your expertise and help you provide the best care. Find live events and webinars from industry experts and thought leaders.

On demand resources to help you learn anytime. Anywhere.

Science-based solutions aligned with your clinical needs.

Each of the 70+ 3M™ Tegaderm™ Dressings SKUs is designed to meet a different clinical goal, adhere to a wide variety of skin and environmental conditions and is available in an array of shapes and sizes to fit your application. With help from health care professionals like you, we designed a few new products that were several years ahead of clinical guidelines. Let our team help evaluate your facility's dressing program and suggest solutions for your needs.

Vascular Access Securement Dressings and Devices

Dressing and device categories include:

- Antimicrobial Protection (See Page 6) – Suppresses regrowth of skin flora for up to seven days.² Meets the Infusion Nurses Society highest level recommendation to use chlorhexidine-impregnated dressings to reduce the risk of catheter-associated bloodstream infection (CABSI).³
- Catheter Securement (See Page 8) – A comfortable solution that provides patients with securement, site visibility and breathability all in one product. These dressings have up to a seven-day wear time and meet the Infusion Nurses Society definition of a securement device.³
- Bacterial and Viral Barrier* (See Page 10) – The flagship Tegaderm Dressing launched in 1981 provides a waterproof sterile barrier to external contaminants with transparency for easy monitoring.

Wound Care Dressings

Dressing categories include:

- Pressure Injury (See Page 12) – May help prevent skin damage as part of a comprehensive pressure injury prevention program.
- Moisture Control (See Page 14) – Helps optimize the wound environment by managing exudate. Dressings specifically designed for dry to low exudate, medium exudate and high exudate.

In addition to the Tegaderm Dressing family, 3M has other skin and wound care products that help protect skin, protect and prepare the wound bed, provide collagen, provide antimicrobial protection, support granulation tissue formation and provide therapeutic compression.

**In vitro* testing shows that the transparent film of 3M™ Tegaderm™ brand dressings provide a viral barrier for viruses 27 nm in diameter or larger while the dressing remains intact without leakage.

Antimicrobial protection. Innovative securement. All in one.

Bloodstream infections are associated with significant increases in care and costs. In some cases they can even be deadly.⁴ Help reduce infection at IV insertion sites with 3M™ Tegaderm™ CHG Chlorhexidine Gluconate I.V. Securement Dressing.⁵ These transparent dressings provide secure attachment for IVs, offer antimicrobial protection and align with current guidelines.

Tegaderm CHG Dressings Featured Product:

3M™ Tegaderm™ CHG Chlorhexidine Gluconate I.V. Securement Dressing 1657

Breathable

Highly breathable, transparent film creates a waterproof, sterile barrier that protects against external contaminants.*

Secure

Stabilizes IV sites to help reduce the risk of dislodgement.

Transparent

Helps facilitate continuous monitoring for early signs of complications.

Antimicrobial Protection

The chlorhexidine gluconate gel pad of the dressing provides antimicrobial protection and helps suppress regrowth of skin flora for up to seven days.⁶

Integrated Design

All-in-one design combines advanced securement and antimicrobial protection to eliminate the need for multiple products.

Ease of Use

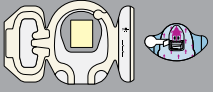

Easy-to-learn application helps ensure consistent protection and simplify securement practices.⁷

**In vitro* testing shows that the transparent film provides a viral barrier for viruses 27 nm in diameter or larger while the dressing remains intact without leakage.

Important Safety Information for Tegaderm CHG I.V. Securement Dressings and Tegaderm CHG Gel Pad. Do not use Tegaderm CHG I.V. Securement Dressings or Tegaderm CHG Gel Pad on premature infants or infants younger than two months of age. Use of these products on premature infants may result in hypersensitivity reactions or necrosis of the skin. The safety and effectiveness of Tegaderm CHG I.V. Securement Dressings and Tegaderm CHG Gel Pad has not been established in children under 18 years of age. For full prescribing information, see the Instructions for Use (IFU). Rx Only.

Get a clear view of consistent, reliable IV securement.

Catheter movement is a prevalent problem. Up to 1/3 of vascular access devices become dislodged.⁸ Securing IV lines properly is a key part of maintaining quality care and patient satisfaction. Help stabilize catheters and minimize movement and dislodgement with 3M™ Tegaderm™ I.V. Advanced Securement Dressing. This family of reliable securement products helps you visualize the catheter site and promote patient comfort.

Tegaderm I.V. Advanced Securement Dressings Featured Product:

3M™ Tegaderm™ I.V. Advanced Securement Dressing 1683

Transparent

Allows a full view of the catheter site for application and early identification of complications.

Protective

Helps keep out external contaminants including viruses* with a sterile, waterproof barrier.

Conformable

Helps reduce edge-lift with conforming edge border technology.

Breathable

Pattern-coated adhesive allows for high breathability across each dressing.

Ease of Use

Frame delivery system and dressing design promote consistent application and removal.

Stabilization

Securement tape strip with notch helps control movement at the hub to reduce the risk of dislodgement.

Patient Comfort

Safe to wear up to seven days, potentially reducing the number of dressing changes and restarts.

**In vitro* testing shows that the transparent film provides a viral barrier for viruses 27 nm in diameter or larger while the dressing remains intact without leakage.

A versatile, transparent barrier to contaminants.

3M™ Tegaderm™ Transparent Film Dressing is the flagship Tegaderm Dressing launched in 1981 and is known as the standard of care. It provides a waterproof sterile barrier to external contaminants including bacteria, viruses*, blood and bodily fluids. These transparent dressings provide full site visibility for precise placement, continuous monitoring and to help minimize unnecessary dressing changes.

For moist conditions, 3M™ Tegaderm™ Diamond Pattern Film Dressing and 3M™ Tegaderm™ HP (Holding Power) Transparent Film Dressing have specialized adhesives, providing better wear for humid conditions or with diaphoretic patients.⁹

Tegaderm Transparent Film Dressings Featured Product:

3M™ Tegaderm™ Diamond Pattern Film Dressing 1686

Breathable

Advanced breathability allows good moisture and vapor exchange.

Bacterial and Viral Barrier*

A waterproof, sterile barrier protects against external contaminants (e.g., blood, fluid, bacteria, etc.) including viruses.

Low Sensitizing

Sterile film includes a low sensitizing adhesive that is not made with natural rubber latex.

Site Visibility

Frame construction makes it easy to apply consistently and transparent film provides full site visibility.

Moisture Management

Designed for patient comfort and longer wear times; especially in hot, humid conditions and on sweaty skin.

Versatility

Unique shapes and sizes for both IVs and minor wounds.

**In vitro* testing shows that the transparent film provides a viral barrier from viruses 27 nm in diameter or larger while the dressing remains intact without leakage.

Start at the surface to manage moisture and help protect at-risk skin.

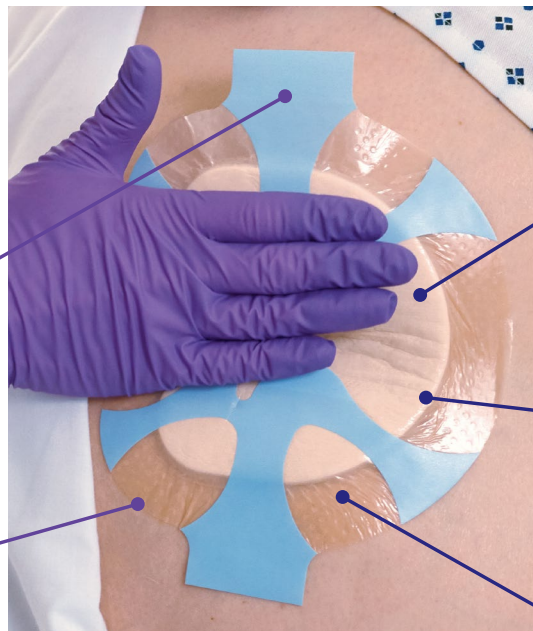

Not all silicone foam dressings offer the same performance. Where other dressings may fall short and fall off, 3M™ Tegaderm™ Silicone Foam Dressing provides adhesion that's strong yet gentle. Its thin, low profile edge minimizes rolling and lift that may impact wear time. The dressing is also designed to reduce the amount of moisture at the skin's surface, helping support the ideal microclimate to help reduce the potential for skin maceration. As shown *in vitro*, Tegaderm Silicone Foam Dressing works to redistribute pressure, which may help to protect patients from pressure injuries.¹⁰ Make Tegaderm Silicone Foam Dressing part of your wound management and pressure ulcer and injury prevention programs.

Tegaderm Silicone Foam Dressing Featured Product:

3M™ Tegaderm™ Silicone Foam Dressing 90647 (Small Sacral)

Patented Spoke Delivery System
Enables easy application even with gloves on.

Thin, Low-profile Edge
Minimizes the rolling and lifting that can impact adhesion and wear time.

Superabsorbent Layer
Absorbs and evaporates moisture.

Fenestrated Foam Layer
Improves flexibility and moisture absorption.

Silicone Adhesive
Dressing can be lifted and repositioned without losing adhesion properties.

Help Minimize Skin Maceration

Innovative multi-layer technology helps minimize the backward moisture migration that can lead to periwound maceration.

Manage Moisture

Moisture control layer helps maintain optimal moisture balance by facilitating evaporation through the film backing.

Remove Easily

Gentle silicone adhesive is shown to remove significantly fewer skin cells than a standard acrylate adhesive – helping to reduce the risk of skin trauma.¹¹
