# I.V. dressing selection guide

# Is your dressing choice improving

Please ensure a full and holistic assessment is made regarding selection of the appropriate vascular access device. 3M™ Tegaderm™ I.V. Dressings support up to 7 days wear time on central IV catheters and for the life of the catheter of peripheral IVs. 3M™ Curos™ disinfectant caps provide antimicrobial protection for up to 7 days if not removed.

Please ensure that all local policies and procedures are followed. Use clinical judgement to adapt dressing selection based on changing vascular access needs.

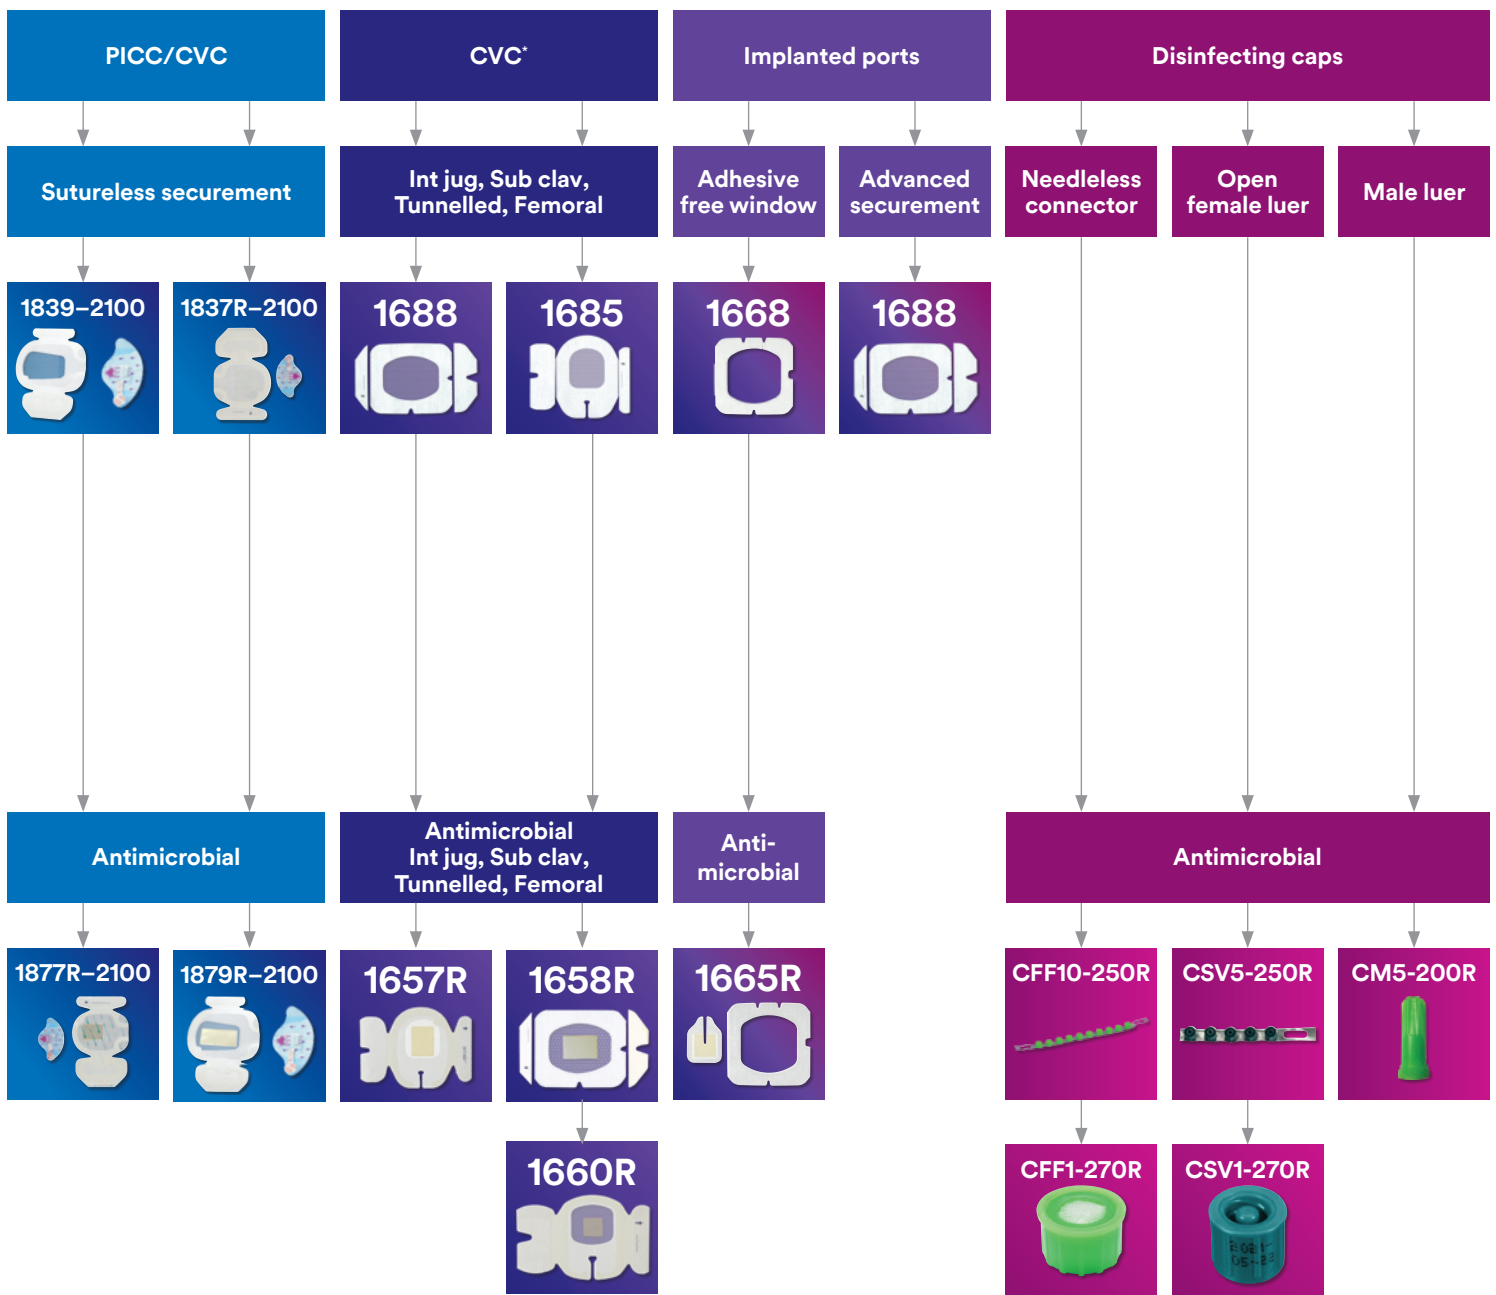

This dressing selection tool is a guide only.

\*In addition, suggested dressings for arterial lines.

**Note: Specific indications, contraindications, warnings, precautions and safety information may exist for these products and therapies.**

Considerations	
<b>Patient</b>	<b>Cath</b>
Mental state, skin condition e.g. diaphoretic or fragile skin, known allergies to any components e.g. chlorhexidine.	Num cathes for h non-

# your patient's outcome?

## Catheter type

Number of lumens, for peripheral catheters whether ported or non-porting, catheter hub size, wing size, tunneled vs non-tunneled, large bore catheters, etc...

## Insertion site

Extra security required over vulnerable areas e.g. wrist, foot, elbow, groin. Consider cannula dwell time.

## Care setting

Critical care, interventional radiology, haemodialysis, ER, OR, home care.

## High risk patients

Immunocompromised, chemotherapy, critically ill, localised signs of infection at insertion site.

Please consult a clinician and product Instructions for Use prior to application.
